

We Offer:

- **Field Based Case Management**
- **Telephonic Case Management**
- **Utilization Review**

Now More Than Ever

Workers' Compensation administrators whether self insured, insurance carriers, or third party administrators, need competent, timely nurse case management. SiennaMed stands out from our competition by providing you with the following:

Workers' Compensation Case Management and Utilization Review (UR)

Our nurses are trained in the latest regulatory requirements. They typically have 10–20 years of career experience and are expert in maintaining effective communication with employers, claims administrators and claims adjusters.

Pre Placement Training

Our nurses participate in ongoing Workers' Compensation Case Management Training to enhance their years of industry experience and ensure their familiarity with recent industry changes.

Bilingual, Gender and Cultural Diversity

We offer bilingual, culturally diverse, male and female nurses. Recovery moves more rapidly with fewer disability days and less probability of litigation when the injured worker feels comfortable with their nurse case manager.

Early Intervention / Early Return to Work Strategies

Each of our nurses has been trained to begin making an immediate impact on your cases from the first day of their assignment. Our nurses apply ACOEM and MDA guidelines and develop a Claimant Profile with Plan of Action for Case Resolution. Our strategies improve communication with all parties and establish trust with the claimant, which decreases incidents of malingering and expedites resolution of your claim.

Documented Indemnity and Medical Savings

Amidst all of the insurance industry changes, your company's longevity depends on cost containment. Statistics have shown that the longer a file remains open, the higher the PD findings will be once the claim is resolved. Our nurses are trained to provide you with clear evidence of their value on your cases by documenting reduction in Indemnity Paid, Medical Savings and Early File Closures, that help you track your savings and lower your file reserves. Over time, a steady reduction in the amount of Medical and Indemnity spent on each file, will give you the competitive edge you need in an industry where costs continue to approach crisis levels.

Ongoing Support

Our nurses have access to all of the resources available at SiennaMed, even after they have been placed with your company. Under the leadership of our Medical Director (MD) and Director of Nursing (RN, PhD), you can rest assured that your nurse is supported by more than just one source in the effort to manage your cases effectively.
